# JIMCO - ABOUT US

## UV-C AND OZONE SOLUTIONS FOR THE FUTURE

Jimco A/S is the company behind some of the world's most unique air and waste-water purification and sterilisation solutions. Since designing its very first air-cleaning unit in 1993, Jimco A/S has not looked back. Today, the company supplies its products to a large number of industries and institutions worldwide. Its customer base comprising factories within the food industry, commercial kitchens, waste-water treatment plants, schools and nursinghomes. In brief, Jimco A/S undertakes all types of projects — large and small.

Jimco A/S combines common sense with innovative thinking as the basis of the company's unique products. It is no coincidence that Jimco A/S supplies air-treatment units to some of the biggest chains in the world— including McDonald's, Scandic Hotels, McCain, Danish Crown etc.

Jimco A/S is known as an innovative and ground-breaking developer of unique and functional products. Its world famous air-treatment units are based on a very special technology — photolytic oxidation. The term covers the concept of cold burning in which the harmful microorganisms in the air are destroyed, while at the same time breaking the odour-binding molecule chains.

All Jimco A/S plants are characterised by their high levels of user-friendliness and simple design while also being environmentally friendly on account of the very low power consumption.

Jimco A/S is continuously developing new products to meet the ever-changing requirements of today. Increased focus on the importance of a good indoor climate has inspired Jimco A/S to develop a special air-sterilisation system, which can be used anywhere — in kindergartens and schools, in museums, hospitals and nursing homes. In brief, in any place where clean air and the breakdown of bacteria are of material importance.

## AIR-CLEANING TREATMENT

Jimco A/S has specialised in the reduction of grease and odour problems through development of advanced patented UV-C 6 Ozone technology. This technology eliminates a number of environmental hazards generated by industrial and commercial processes.

## SURFACE DISINFECTION

Due to increasingly higher hygiene demands in the food processing industry etc., the use of UV-C light to eliminate microorganisms e.g. bacteria, fungi and virus is becoming more and more commonly used.

## WASTE MASTER

Jimco A/S has advanced the development of a new technology for pre-cleansing organically loaded waste-water. The technology is called Ozone flotation and no form of chemical treatment is required in the process.

- ▶ Tested and reliable equipment
- ▶ Effective reduction of odours and VOC's
- ▶ No Use of chemicals or fragrant oils
- ▶ No use of filters or absorbents
- ▶ No use of microbiology
- ▶ No liquid effluent or harmful residues
- ▶ Compact installation to efficiently utilise space
- ▶ Simple to retrofit into existing buildings
- ▶ Instant start—up and shutdown
- ▶ Competitive investment cost
- ▶ Low maintenance and operation cost
